

Reliable Protection from Contamination

Hygiene Input Filter

Multi-resistant bacteria pose a growing challenge to emergency medical services. As more and more epidemics occur around the world, greater demands for better hygiene increase too. Very often, however, an infection is detected only after a patient has been transported.

We have risen to this task and have made MEDUMAT Transport even safer. An optionally available hygiene filter at the input protects the device's interior not only from dust particles but also from contamination by bacteria or viruses. When ambient air is mixed with respiratory gas, the device reliably protects the device from microbes. The risk of cross-contamination is significantly reduced. Existing devices can be refitted with a hygiene input filter.

Especially helpful: MEDUMAT Transport reminds you after six months that it's time to change the filter. That too prolongs the service life of your device.

It's very easy to refit your device with the hygiene input filter

Here's what you do:

- Contact your local WEINMANN Emergency service partner
- Make an appointment for the refitting
Tip: Have the filter refitting done during regular maintenance. Then you'll have considerably less logistical effort and down-time for the device, but maximum readiness for use.
- That's it.
- After six months the device automatically reminds you to replace the filter.
